EIS002104

STEVE ROGERS

MR. ROGERS: Thank you, Mr. Moderator. My name is Steve Rogers. I'm retired from the nuclear industry from Hanford, Fernald, West Valley, quite a few, and I'm also on the salt project when it was at Hanford. It's no longer there.

MR. LAWSON: Okay, sir. Before you proceed, obviously we've got some people. Could I ask people around the door to take your conversations further down so that we can get a good record? I'm sorry to interrupt. Now you have only have three minutes.

MR. ROGERS: I'm not even going to take three minutes, Mr. Moderator.

1 I've kind of read the highlights from the EIS and basically the main focus I have, MRS has not been really addressed, material retrievable storage. It's a very viable situation. It can bring the research center here. It could basically upgrade Nevada and her technology, not only nuclear, but other avenues such as medical and electronics and anything that's in high-tech. This is the only thing. I'm going to speak tonight, some I'm kind of gathering my thoughts and let you know I'm going to kind of elaborate on the MRS and the EIS more so, and I thank you very much for taking my patience.
